Process Mining Specifics

Inactive Profiles

Users of Process Mining can create analyses for every process that is saved in one of their assigned profiles. Therefore, they will notice if a profile has been disabled: If a profile is deactivated, the user will not be able to analyse the corresponding processes any more.

Already created analyses will show the message **No permission to analyse this process**.

> ✅ Go to Troubleshooting Process Mining for further information.

Usage of Roles

> ℹ️ Menu **Roles** is currently not used for Process Mining.

Usage of Permissions

> ⚠️ An administrator must not create new permissions for Process Mining. The necessary permissions for the creation of analyses, templates and users are covered by the standard profiles **analytics_user** and **analytics_admin**.
