

Additional xUML Service Tabs

Version

Switch to the **Version** tab in the information/working area.

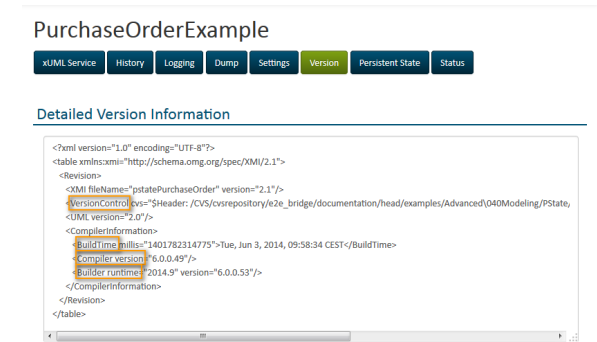

All users have access to the version information of an xUML service.

The XML file presents among others the following version information of the xUML service:

Version	Service version as specified in the component diagram.
Compiler	Version of the compiler.
BuildTime	Timestamp of the compilation of the service.

The version information described above is also displayed for each library the xUML service is using.

The XML file presents among others the following version information of the xUML service:

Status

Switch to the **Status** tab in the information/working area.

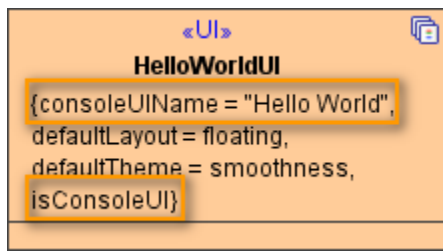

All users have access to this tab.

On this Page:

- Version
- Status
- User Interface

Related Pages:

- Transaction ID
- Modeling User Interfaces

The label of the tab is specified via the tagged value **consoleUIName**. For more information on user interfaces refer to [Modeling User Interfaces](#).
