

Node.js Services Reference Guide

You can run Node.js services on the E2E Bridge® as described in [Managing Node.js Services](#). Additionally, you can use a set of ready Node.js modules facilitate building own Node.js services. The Node.js Services Reference Guide is a comprehensive E2E Bridge guide that describes how to use these modules and to get the most out of them.

All Node.js packages can be downloaded from [NPM](#). Just search for the module name listed in the documentation (or click one of the links in the table below) and install it using `npm install <name of the module>`.

Topic Overview

Documentation	Name of the Module	Short Description	GitHub Link	NPM Link
E2E Authorization Package	e2e-auth	Passport like module used for authentication and authorization against E2E Authorization Server	e2e-auth@GitHub	e2e-auth@NPM
Node.js Interface to the Bridge	e2e-bridge-lib	Node.js library allowing interaction with the Bridge	e2e-bridge-lib@GitHub	e2e-bridge-lib@NPM
E2E Transaction Logger for Node.js	e2e-transaction-logger	Transaction logger to use with the E2E Bridge	e2e-transaction-logger@GitHub	e2e-transaction-logger@NPM

Preconditions

An understanding of object-oriented concepts and Node.js is useful.
