BRIDGE Release Cycle

Each BRIDGE major release has an active phase and a maintenance phase assigned. Find below an overview on the current releases and the phase they are in:

Version		Start Active Phase	Start Maintenance Phase	End of Life
BRIDGE				
7		2018	Jan 2022	-
6		2013	Jan 2020	Dec 2020
xUML RUNTIME				
Windows	64-bit	2011	-	-
Linux	64-bit	2011	-	-
BUILDER				
7	MagicDraw 18	2018	Jan 2022	-
6	MagicDraw 18	2013	Jan 2020	Dec 2020

(BRIDGE 7 related information is highlighted in blue.)

The Release Phases in Detail

- **The Active BRIDGE Release Phase**

In its **active phase**, the BRIDGE release will be refined. Via regular updates, you will receive improvements and bug fixes. We guarantee that all deployed xUML services will work without the need to modify or recompile the services. If a customer has a critical issue, we will asap deliver a patch.

We will release approximately 2-4 minor versions a year. The active phase of a BRIDGE release will last about 4 years.

- **The Maintenance BRIDGE Release Phase**

In maintenance phase, you will continue to get bug fixes. New features and improvements will be implemented to the latest BRIDGE version, however.

The maintenance phase of a BRIDGE release will last about 3 years.

Supported Operating Systems

If operating systems are not supported by their providers anymore and come to their end of life, we will also cease to support them.

BRIDGE	Windows Version	Linux Version	Docker
--------	-----------------	---------------	--------

7	- Windows 10 - Windows 8.1 - Windows Server 2019 - Windows Server 2016 - Windows Server 2012 R2	- RedHat Enterprise Linux 7 x86 - RedHat Enterprise Linux 6 x86 - Ubuntu 18.04 LTS - Ubuntu 16.04 LTS	Docker 18.06
6	- Windows 10 - Windows 8.1 - Windows Server 2012 R2	- RedHat Enterprise Linux 7 x86 - RedHat Enterprise Linux 6 x86 - Ubuntu 18.04 LTS - Ubuntu 16.04 LTS	

(BRIDGE 7 related information is highlighted in blue.)
