

# Deleting E2E xUML Services

Users who are member of a group, to which the role **MODELER** has been assigned, are allowed to delete xUML services only, if they themselves or a member of the same group deployed them.

In order to get a list of all xUML services running on a node instance, expand a node instance in the **Node Instances** section of the navigation on the left. Then, click the sub-navigation item **xUML Services**. The tab **xUML Services** is initially displayed.

When deleting xUML Services, please note the following:

- You can only delete xUML services, which have been stopped.
- If you are using **Scheer PAS Process Mining**, you will have to disable the service in the Process Mining settings (further information can be found in the Installation Guide on page [Disabling xUML Services from Process Mining](#)).

 Auto Refresh[View](#)[Start All Instances](#)[Stop All Instances](#)

Click the **Delete** button of the xUML service you want to delete.

Alternatively, an xUML service can be deleted directly on the **xUML Service** tab. Choose the xUML service you want to remove in the navigation. Then, click **Delete**.

## Delete xUML Service

Delete xUML service 'HelloWorldExample'?

Delete xUML Service

Cancel

In both cases, you need to confirm the removal of the xUML service by clicking **Delete xUML Service**. You may also **Cancel** the transaction.

After successful deletion of the xUML service, the updated list of xUML services is displayed.
