Guided Update of the BRIDGE with GUI

Step 1: Starting the Installer

- Stop all running services of the former BRIDGE installation in the administration UI to make sure that all BRIDGE processes are terminated. This ensures that all services will be restarted by the new BRIDGE after its installation.
- 2. Stop the Windows service/Linux daemon E2E Console.
- 3. Start the BRIDGE installer with the command <path to your java installation>\java -jar BridgeInstaller-<...>-64-7.x.x.jar and proceed with Step 2: Going through the Update Process.

Step 2: Going Through The Update Process

On this Page:

- Step 1: Starting the Installer
- Step 2: Going Through The
- Update Process
