

Uninstalling a Docker Bridge

To completely uninstall a BRIDGE that has been installed with Docker, you need to remove

- the Docker container
- the Docker volumes
- the Docker image

Step 1: Removing the Docker Container and the Volumes

1. Go to the folder where you have stored your **docker-compose.yml** file.
2. Drop the BRIDGE Docker container and its related volumes with

```
docker-compose down -v
```

Option `-v` irreversibly removes the BRIDGE data directory of the BRIDGE installation. If you only want to remove the Docker container, use

```
docker-compose down
```

Step 2: Remove the Docker Image

Remove the BRIDGE Docker image using

```
docker image rm bridge:<version>
```

If you have kept multiple images of the BRIDGE, you need to remove them one by one, specifying the version.
