

Navigation Bar

Page Navigation

The navigation bar is used for navigating through different tabs, such as **Explorer Tab, Administration Tab, and Messages Tab** or **model tab**. It allows you to keep several models opened at the same time.

The navigation bar is always visible, regardless of the number of models opened. Navigation is simple: Just click on the model (tab) you want to display.

The position of the tabs in the navigation bar can be changed at any time. Simply **drag and drop the tab** to the position you want it in.

If you want to **close** any of the tabs, you can do it by clicking on the X in the right corner of the tab.
