**Permissions** give you an option to add or remove the user permissions to a **folder**.

There are **two types** of permissions:

1. Users with **Write** permission can **edit, remove, or add** a new folder/model.
2. Users with **Read** permission can only **view** a folder structure and models in that folder.

If you have read permission, you can view the model, without the possibility of editing (read-only mode)

## Adding Permissions

Cancel

When you right click on the folder and select the option **Permissions**, a pop-up window will open.

In the window, the current permissions for that folder are displayed. If you have write permissions, you can add or edit user permissions.

☒ Invite group

☐ Invite people

Save

Cancel

If you want to **add** permissions to a group of users, choose **Invite group** option and then enter the name of the group /role, and select **Write** or **Read**.

When you have finished, click on the icon **Add**, and after that click **Save**. This will add new permissions to a selected group/role.

For more details on the role's options visit page [Managing Roles](#).
