

# Link Attribute

## Creating a Link Attribute

Attributes tab interface showing:

- Name: Test Model 1
- Link Attribute: [Empty field]
- Model Type: Value Chain Diagram
- Icon: [Blue icon with downward arrow, highlighted with an orange box]
- Button: Add new attribute

The **Link attribute** gives you the option to upload documents, images or files. Also, you can add web links to the **attribute with external source**.

Click on the icon on the right side of the field to upload a file from your PC, or enter (paste) a **address /link** from the web to add it to the attribute.

Model TypeEvent Driven Process Chain

+ Add new attribute

Google Chrome and other web browsers do not allow local file links, which start with **file:///**, because of potential malicious files. If local file links were allowed, the security of our application would be seriously threatened.

What you can do is **copy** your local file link from the **attributes** section, **paste** it into the new tab and press **enter**. This way, your web browser will open your local file link.

## Customizing the Attribute

☐ Display Attribute Name

☒ Display Icon

When you drag&drop the **link attribute** on canvas area, make sure to check **Display icon** checkbox in **Model properties - Attributes** panel.

If you check **Display icon** checkbox, link attribute will show on canvas area as symbol/icon you previously uploaded.

If you did not upload an icon for the link attribute and you checked **Display icon** checkbox, link attribute will show on canvas area as default link symbol.
