

# Local Role

## The Element Local Role

Deprecatd with PAS 18.1

The following usage description of roles is deprecated.

Starting with version PAS 18.1 we urgently recommend to create apps with central role management. Starting with version PAS 18.1 please only use the element [Role](#).

E l e m e n t	
F u n c t i o n	<p>In organizational charts the element Local Role is used as a descriptive element in order to display separate roles as for example Head of Markering. In EPC models this element is used to define, that certain process steps may only be executed by owners of specific roles. Allocating roles to users is performed in the element <a href="#">User Role Administration</a>.</p> <div> Additional information regarding creating role based apps can be found in the BPaaS Guide on page <a href="#">Role-based Authorization Concept</a>.</div>
C o n n e c t i o n	<p>Predecessor: <b>Organization Unit</b> Successor: <b>Person</b></p>
