

# Process App Links

Two different form elements are available for linking app content: The element [Process App Link \(single\)](#), which refers to one instance of another app, and the element [Process App Link \(multiple\)](#), which can refer to multiple instances of another app.

## The Element Process App Link (single)

Element icon in Sidebar	 <b>Process App Link (single)</b>
Form Field	
Function	With the element Process App Link (single) you can reference <b>one</b> instance from another app.
Default	By default, the App Link is empty, displaying buttons for searching, creating and deleting an instance. You can preset the element in edit mode  . Terminate the edit mode with  .
Example	<p>In an order form, the name of the customer's company as well as the name of the contact person shall be displayed. As this information is already saved in the <a href="#">Customer Database</a>, a Process App Link (single) is inserted in the order form. The element references the app <a href="#">Customer Database</a> and is configured to display the desired information.</p> <p>During app execution, the user clicks on the app link's icon  which opens the overview of the app <a href="#">Customer Database</a>. As soon as he has selected an address, the overview is closed and the information is displayed in the app link as configured: The company's name as well as the name of the contact person are shown. A click on the displayed link will now always lead back to the corresponding instance of the app <a href="#">Customer Database</a>.</p> <div data-bbox="194 1585 771 1690"><p>Customer Contact</p><p>   <a href="#">Spring Corp. - Rose - Bloom</a></p></div> <p>If the user cannot find the address he is looking for in the <a href="#">Customer Database</a> app, he can create it directly. To do this, he clicks on  to open the input form of the <a href="#">Customer Database</a> app where he can directly create a new entry for the <a href="#">Customer Database</a>. The data is saved as new instance in the <a href="#">Customer Database</a> app - and the company's name as well as the name of the contact person are also displayed in the app link in the order form.</p>

<p><input checked="" type="checkbox"/> Save Value in Instance</p>	<p><b>Save Value in Instance</b></p> <p>If this checkbox is marked, the value entered in this field will be saved during form execution.</p> <p>In this case the value is a whole instance from the referenced app.</p>
<p>Field Name in Container</p> <hr/>	<p><b>Field Name in Container</b></p> <p>Defines the name under which the form element will be saved in the database. If the <b>Field Name in Container</b> remains empty, then the field identifier (<b>name</b>) of the referenced app is used. If two form elements share the same <b>Field Name in Container</b>, then both will have the same value.</p> <div data-bbox="876 1499 1502 1635">  The <b>Field Name in Container</b> is a technical identifier. It is often extended with coding. Therefore the <b>Field Name in Container</b> should not contain any spaces, special characters or umlaut. For further information see <a href="#">The Container Principle</a>. </div>

## The Element Process App Link (multiple)

Element icon  
in sidebar

Form Field

A preview of the 'Process App Link (multiple)' form field. It shows a header 'Process App Link (multiple)' with search, add, and delete icons. Below is a table with one column labeled 'Column 1'. At the bottom, there is a pagination bar showing 'Page 0 of 0' and a dropdown menu set to '20'.

Function

Use the element Process App Link (multiple) to reference **multiple** instances from another app.

Default

By default, the element contains the sample column **Column 1**. An **Instance Table** is displayed, supplemented by the buttons for searching, creating and deleting an instance. You can preset the table navigation at the bottom of the table in edit mode . Terminate the edit mode by clicking .

Example

The **ACME Procurement** app contains an order form to enable the employees ordering office supplies. Part of the form is the Process App Link (multiple) **OrderList**. It is linked to the app **Catalog** in which all available items are stored.

During the creation of an order, the employee can click on to open the **Catalog** and select items (= instances of the Catalog app). These are transferred as links into the table **OrderList**:

A preview of the 'OrderList' table. It has a header with columns: Quantity, Item Name, Color, Price per Unit in \$, Total, and Overnight. The table contains five rows of data. At the bottom, there is a pagination bar showing 'Page 1 of 1' and a dropdown menu set to '20'.

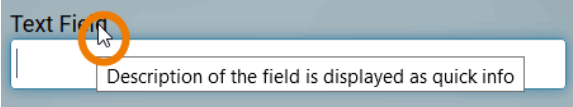

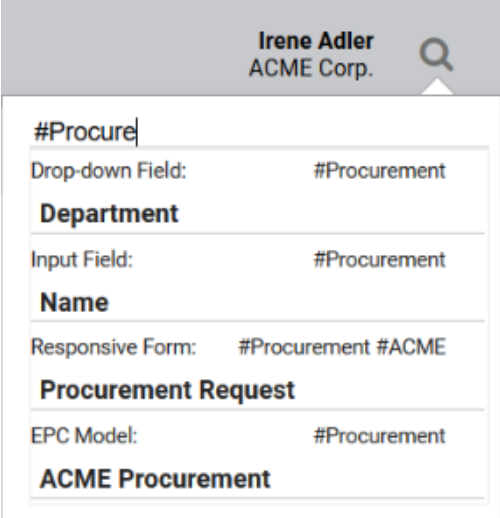

Quantity	Item Name	Color	Price per Unit in \$	Total	Overnight
<input type="checkbox"/>	Desk Lamp		36.50		<input type="checkbox"/>
<input type="checkbox"/>	Writing Pad, ruled		0.99		<input type="checkbox"/>
<input type="checkbox"/>	File Folder		5.99		<input type="checkbox"/>
<input type="checkbox"/>	5 Highlighter		4.99		<input type="checkbox"/>
<input type="checkbox"/>	4-Slot Wall Mounted Er		12.80		<input type="checkbox"/>
<input type="checkbox"/>	Crayons, assorted		5.99		<input type="checkbox"/>

A click on one of the displayed table rows opens the corresponding instance in the app **Catalog**.

As an employee is not authorized to add new items to the catalog, the button has been disabled for this app link.

## Configuration Options

The form element may be edited via the **Edit Sidebar**.

<b>Name</b> <u>Process App Link (multiple)</u> 	<b>Name</b> Field name shown in the form.
<b>ID</b> rp02727f33-b7cf-40ef-886e-b4da441295ff	<b>ID (       )</b>  The read-only field contains the model ID of the element. Designers can use the ID for example in the <a href="#">search</a> to link the element in other models.
<b>Description</b> <div></div>	<b>Description</b>  When a user hovers over a form element during execution, the content commentary field is shown as a quick info:  
<b>Hashtags</b> <div></div>	<b>Hashtags</b>  Possibility to insert your own key terms . The leading hashtag sign # (h) will be inserted automatically.  Use the space bar to separate multiple hashtags:  <b>Hashtags</b> <u>#Procurement #ACME</u>  One hashtag may be issued for multiple elements:  
<b>Additional CSS Classes</b> <div></div>	<b>Additional CSS Classes</b>  Enables a field-accurate layout customization.

<input type="checkbox"/> Mandatory	<b>Mandatory</b> The marked element must be filled or used.
<input type="checkbox"/> Read Only	<b>Read Only</b> This field is write-protected.
<input type="checkbox"/> Allow Usage of Start Link without Role Check	<b>Allow Usage of Start Link without Role Check (                    )</b> <p>From role-based apps, you can only access linked apps if role-specific links (<b>Process App - Create</b> and <b>Process App Overview</b>) have also been created in the child app. If you activate the option <b>Allow Usage of Start Link without Role Check</b>, a user can also access the data of the child app start link without role check has been created.</p> <div>  <b>Use this option carefully!</b> If a link without role check is used instead of a role-specific start link, the user may view all instances from the linked app. </div>
App Project 	<b>Process App Project</b> Insert the name of the App Project you wish to link. This field uses autocomplete and shows matching App Projects in a recommendation list. After an App Project has been entered, you can open the corresponding model using the  button.
Default Page Size 20 	<b>Default Page Size</b> Determines the default value for the table page size.
Column Configuration 	<b>Column Configuration</b> Click on the gear wheel to open an editor, which enables editing the configuration of the table. An overview of available options can be found on page <a href="#">MultiExcerpt Table Configuration</a> .
Configure Column Type 	<b>MultiExcerpt named column_type_config was not found -- Please check the page name and MultiExcerpt name used in the MultiExcerpt-Include.</b> The color of the gear wheel shows, whether an element is empty (light grey) or if content has already been saved (dark grey).
<input type="checkbox"/> Open Overview in New Tab	<b>Open Overview in New Tab</b> If this option is activated, a click on  opens the corresponding overview in a new browser tab.
<input checked="" type="checkbox"/> Open New App in New Tab	<b>Open New App in New Tab</b> If this option is activated, a click on  opens a new browser tab for the creation of a new instance.

<input checked="" type="checkbox"/> Open Instance in New Tab	<p><b>Open Instance in New Tab</b></p> <p>If this option is activated, a selected instance is opened in a new browser tab.</p>
<input checked="" type="checkbox"/> Save Value in Instance	<p><b>Save Value in Instance</b></p> <p>If this checkbox is marked, the value entered in this field will be saved in the database during form execution.</p> <p>In this case, the value consists of one or more instances from the referenced app.</p>
<p>Field Name in Container</p> <hr/>	<p><b>Field Name in Container</b></p> <p>Defines the name under which the form element will be saved in the database container. If the <b>Field Name in Container</b> remains empty, then the field identifier (<b>name</b>) will be used. If two form elements share the same <b>Field Name in Container</b>, then both will access the same value.</p> <div data-bbox="878 682 1495 816">  The <b>Field Name in Container</b> is a technical identifier. It is often used for extended coding. Therefore the <b>Field Name in Container</b> should not contain any spaces, special characters or umlaut. For further information please visit page <a href="#">The Container Principle</a>. </div>
