

The Sidebar

The basis for working in BPaaS are projects. In a project the essential work steps take place: Here you model your business process and create executable Process Apps.

For later use, this means: After logging in, you either want to work in a project or start a Process App. For this reason, you can create tiles in the cockpit for projects and Process Apps, which give you access to the respective content with just one click.

The sidebar allows you to manage your cockpit. It consists of three menus:

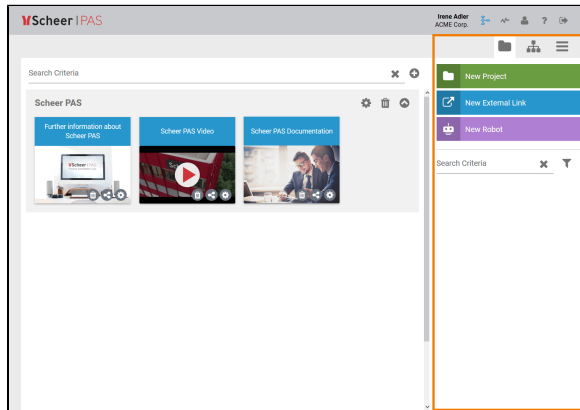

- **New Elements**

- **Hierarchy**

- **Additional Actions**

The functionalities of the different sidebars are explained in detail on the following pages.
